SOFTWARE DEVELOPER

Metsys Oy

- Frontend
- UI- design and development
- Angular

Competence

Angular + Nodejs

(ts, js, html, css)

Lot of experience from school, and I also have been working on Metsys with angular for 11 months (5,5 as a trainee + 5,5 as an employee)

MySQL

Some experience from school, and from project.

Python

I've done couple of web scrapers, and advanced probability calculator for betting odds

AWS

I did course for aws academy machine learning.

Language skills

Finnish

Native language

English

Great

Swedish

Beginnings

Projects

Acorn

I did work as a Scrum master, and a frontend developer in our student project, where we created an app for studying how to play guitar. Length of the project was around 5 months, and during that time we had to design and create working application with voice recognition, ingame currency, and quizzes. More information about this project can be found from my portfolio-page concerning this project at (in finnish) <https://sutsujz.github.io/tekniikka.html>

Metsys

I am currently woking on a project to create application for warehouses.

About me

I'm fourth year student with already some work experience. Before studying I used to play floorball professionally, so working in a group or with some pressure are familiar things for me.
